Flag question

What is the purpose of the Observer pattern in software design?

- ☐ a. To convert one interface into another that a client expects.
- ☐ b. To define a dependency between objects so that when one object changes state, all its dependents are notified and updated automatically.
- ☐ c. To provide a centralized point of access for a set of related interfaces or methods.
- ☐ d. To ensure that only one instance of a class is created and provide a global point of access to it.
