🚩 Flag question

A user needs a program that stores the following resistance values: 16, 27, 39, 56, and 81. Moreover, he/she needs the program to read current and compute the power as $\text{power} = \text{resistance} * \text{current} * \text{current}$. Determine the appropriate data structure needed to implement this program.

- ☐ a. Single 2D array of float
- ☒ b. Three 1D arrays of float
- ☐ c. One 1D and one 2D array of float
- ☐ d. Two 1D array and one 1D array of float
