Question 9

Not yet answered

Marked out of 1.00

Flag question

Consider the following code to answer questions 54 to 56.

```
double mark [5] = {75.5, 90.0, 67.6, 83.3, 10.2};
// Assume the address of mark [0] is 1024
double *p;
p = mark; // Assume the address of p is 1064
```

The value of `*(mark+ 3)` is

- ☐ a. Error
- ☐ b. 83.3
- ☐ c. 1048
- ☐ d. 67.6
