Question 2
Answer saved
Marked out of 1.00
Flag question

What is the output of the following program?

```
#include <iostream>
using namespace std;
int main()
{
    int a = 9;
    int & aref = a;
    a++;
    cout << "The value of a is " << aref;
    return 0;
}
```

- ☐ a. 11
- ☐ b. 9
- ☐ c. Error

Question 3
Answer saved
Marked out of 1.00
Flag question

What will happen on execution of the following code ?

```
Class base  
{  
};  
class derived: protected base  
{  
};
```

☐ a. It will not compile as the class body of the base class is not defined

☐ b. The compilation of the above code is dependent upon the type of data provided to it

☐ c. It will not compile as the class body of the derived class is not defined

☒ d. It will compile successfully

Question 10

Answer saved

Marked out of 1.00

Flag question

One needs a good practical example of a "producer-consumer" type problem from among the following.

I. A multithreaded audio server, where a thread writes digitized sound into a circular buffer and another thread reads it over to a web page.

II. A printer spooler where files are spooled onto the printer queue, to be taken and printed by the printer driver.

III. A shared database updated by simultaneous queries.

Which of the following is/are true of such a good practical example?

☐ a. Only (I)

☒ b. Both (I) and (II)

☐ c. Only (II)

☐ d. All are true

☐ e. Both (I) and (III)

Question 14

Answer saved

Marked out of 1.00

Flag question

A company needs a program to manage inventory in a warehouse. The program must track item quantities, update stock levels, and generate reports on stock movement. Select the most appropriate sequence of steps and program-implementation techniques you would employ to address this warehouse inventory management problem.

☐ a. Requirement Analysis, algorithm design, writing modular program, data-types selection, documentation, Testing and debugging.

☒ b. Requirement Identification, data-types selection, algorithm design, writing modular program, documentation, Testing and debugging.

☐ c. Requirement Identification, algorithm design, data-types selection, writing modular program, testing and debugging, documentation.

☐ d. Requirement Analysis, documentation, algorithm design, writing modular program, data-types selection, Testing and debugging.

Question 23

Answer saved

Marked out of 1.00

Flag question

Assume the following `x_train, x_test, y_train, y_test=train_test_split(X,Y,random_state=24,test_size=0.2)` identify false statements?

☐ a. It is best practice to give either `test_size` or `train_size` while splitting , otherwise the system will use the default 75% for training and 25% testing

☐ b. `random_state` helps to reproduce the same train test split each time you run the code

☐ c. The `random_state` helps us to set random number for shuffling before splitting our dataset

☒ d. Assume X is our features, and Y is the label, then we can exchange the order in the code

☐ e. `train_test_split` class should be imported from `sklearn.model_selection` library, otherwise will not work

Question 60

Answer saved

Marked out of 1.00

Flag question

What is the primary objective of the Facade design pattern in software architecture?

☐ a. To encapsulate a request as an object, thereby allowing for parameterization of clients with queues, requests, and operations.

☐ b. To ensure that only one instance of a class is created and provide a global point of access to it.

☒ c. To define a one-to-many dependency between objects, ensuring that changes in one object automatically trigger updates in others.

☐ d. To provide a unified interface to a set of interfaces in a subsystem, simplifying complex system interactions.

Question 66

Answer saved

Marked out of 1.00

Flag question

What is the purpose of the Observer pattern in software design?

☐ a. To ensure that only one instance of a class is created and provide a global point of access to it.

☐ b. To convert one interface into another that a client expects.

☐ c. To provide a centralized point of access for a set of related interfaces or methods.

☒ d. To define a dependency between objects so that when one object changes state, all its dependents are notified and updated automatically.
