

- C. Place  
D. Promotion
83. Which one of the following is **not true** about product life cycle?  
 A. In the introduction stage Use cost-plus pricing strategy  
 B. In growth stage the company advertizes among early adopters and dealers  
 C. In the maturity stage the marketing strategy is to maximize profit while defending market share  
 D. In maturity stage there is low cost per customer  
 E. None
84. Company X and Company Y produce the same product if Mr x increase in a product's price as transportation, duty, and distributor margins are added to the factory price this situation is called \_\_\_\_\_  
 A. Transfer pricing  
 B. Price escalation  
 C. Gray market good  
 D. Skimming
85. \_\_\_\_\_ entry modes are long-term non-equity associations between an international company and entity in a foreign target country  
 A. Exporting  
 B. Contractual  
 C. Greenfield  
 D. Acquisition
86. Which of the following is a **categorical variable**?  
 A. Tire pressure  
 B. Bank account balance  
 C. Daily sales in a store  
 D. Eye color
87. Over the past 10 years, the return on stock A has averaged 10.4% with standard deviation of 3.1%. The return on stock B has averaged 4.6% with standard deviation of 0.8%. Which of the following statement is true?  
 A. Stock A has smaller relative variation than stock B  
 B. Stock B has smaller relative variation than stock A  
 C. Both stocks exhibit the same relative variation  
 D. Unable to tell with the given information
88. Suppose data are normally distributed with a mean of 120 and standard deviation of 30. Between what two values will approximately 68% of the data fall?  
 A. 60&180  
 B. 105&135  
 C. 90&150  
 D. 30&210
89. A researcher is studying students in college in California. She takes a sample of 400 students from 10 colleges. The average age of all college students in California is  
 A. statistic  
 B. A parameter  
 C. The median  
 D. A population  
 E. None of the above

90. Which of the following statements is the most accurate description for the concept of Standard deviation?  
 A. The total distance from the smallest score to the highest score  
 B. The square root of the total distance from the smallest score to the highest score  
 C. The squared average distance between all scores and the mean  
 D. The average distance between a score and the mean

91. A coin is tossed 5 times, what is the probability of getting 5 heads?  
 A. 0.5  
 B. 0.3125  
 C. 0.1563  
 D. 0.03125

92. A university found that the probability of a student being a member of a fraternity is 0.15. What is the probability of a student not being a member of a fraternity?  
 A. 0.15  
 B. 0.85  
 C. 0.1563  
 D. 0.03125

$$\bar{X} = 120$$

$$SD = 30$$

$$A = 10.4\%$$

$$B = 4.6\%$$

$$Z = \frac{X - \bar{X}}{SD}$$

$$Z = \frac{X - \bar{X}}{SD}$$
